

A new innovative way of living

Fiji's First Living Choice, the only way to live – safe.clean.simple.today

Amazing long term sustainable modular solution

Interior design and furnishings

Finished product with decking and foundations and insulation depending on choices on offer

Conceptual plan

Modern, easily maintained kitchen

Modern, easily maintained kitchen

With an increasing and continued shortage of quality housing stock, limited building resources and unpredictable weather patterns (cyclones, floods, quakes), Complete Solutions is offering a highly durable, long term sustainable, cyclone resistance (150km/h) and earthquake rated, modern modular home concept – from single to 4 bedroom to offices and outdoor living spaces - with varying options available to complement your preferences in terms of high quality bathrooms, integrated kitchens and internal / exterior insulations and outdoor living.

Exclusively designed to maximise the space potential and while promoting privacy this is a no-surprises solution for anyone looking to build a better home/shop for families and businesses in a shorter time and at a reasonable price.

This is the one and only response to safe, clean, eco-friendly and affordable housing that has the certainty and security features that individuals and families are constantly seeking, without the hassles of any major maintenance work each year.

Our highly dependent, experienced and world-renowned global supplier (across Europe, Africa, US and Australia) is an industry leader in modular / prefab homes with an impressive and long-term track record. They have worked with us closely to develop these modular concepts to make it more suitable to the Fiji way of 'island living' and have already supplied to the various island countries. Depending on your family, retail and commercial needs, we can tailor fit our modular concepts to suit any preferences, climatic conditions, building code standards and personal needs.

Depending on your choices we can offer a standard or a custom-made solution in terms of colours, insulation types, cladding and customise your dream home that is affordable, safe and cost effective and long lasting.

Should you require additional accessories, beds, stove, ovens and fridges, these can be also priced up quite reasonably with all modular packages.

Standard features include roof load 100kg, floor load 200kg/m², galvanised steel frame, fireproof walls, glass windows, steel or PVC doors, water connections, integrated I or L kitchen, plumbing, exterior and interior cladding.

Starting from an affordable price ranges of a basic build to a superior, highly durable a standard 2-bedroom (37sqm), kitchen, toilet, bathroom and foundations*, this will be the ideal solution for either:

- A 2-4 bedroom home (single level)
- An extension to an existing home (single level)
- A smart, safe solution for elderly parents (granny flat also rentable)
- A remote office / space (commercial purposes)
- Temporary retail, training premises
- Remote holiday home away on the coast (weekend bach)
- Community Halls (church activities, meetings)
- Commercial premises (will need to be discussed)

The most attractive factor is the easy assembly, built and setup timeframes at your premises which will be carried out by our team.

Once the 60% deposit** is paid, we will have this unit functional, within 2 weeks***. An extension of our professional services also includes project management consultancy. To reduce the hassle and stress associated with the installation process, we can offer our technical team's expertise to manage and alleviate the challenges while offering regular updates to ensure your build is as hassle free as possible.

Depending on the key milestones and the agreed build approach, we can assist in streamlining the build, installation and hand over keys on time based on our build quality management system/tools.

***(excluding appliances, Geotech site works, connection to all services, council approval & fees, delivery to site, customs excise/duty).**

**** Depending on the project, approximately 60% deposit will be required for the initial instalment, 30% at the time its erected-on site and the balance once the structure and keys, certifications/ manufacturer's warranty is completed and handed over.**

*****Clear, continuous dry weather conditions (2-4 days) will be required from the time landed to its correct designation to complete (foundations, can be arranged separately if required). Please note, images are artist's impression only and specifications may vary between products. Some conditions and regional variations may apply. Price indication only and excludes land**
